FLAGSHIP E-COMMERCE REFERENCE SYSTEM

ANGULAR 21 + FASTAPI 0.115 + MSSQL 2022

CAPGEMINI GENERATIVE ENGINE GROUNDING

LuxeMart: High-Throughput Luxury E-Commerce & Grounded Generative AI Concierge

An enterprise-grade, end-to-end luxury retail platform architected for microsecond catalog reads, ACID-compliant multi-step checkouts, and zero-hallucination conversational shopping powered by real-time relational database grounding.

Author & Lead	Vijay Kumar (Capgemini)
Target Latency	P95 < 150 ms (Catalog)
Database Engine	MS SQL Server 2022
AI Integration	Capgemini GenEngine (4 Models)
Compliance	RBAC, JWT HS256, Bcrypt

HIGH-LEVEL ARCHITECTURAL VISION

Cognitive Omnichannel Commerce & Resilient Infrastructure

Click image to expand / collapse

CATALOG LATENCY

< 150 ms

P95 with PyODBC connection pool

AI MODELS SUPPORTED

4 LLMs

GPT-5, Claude 4.5, Phi-4, Mistral

AI HALLUCINATION RATE

0.0%

Guaranteed via live DB injection

SEEDED TAXONOMIES

6 Categories

27+ curated luxury items with JSON specs

SECURITY STANDARD

100% RBAC

Bcrypt hash + Stateless JWT claims

FULFILLMENT PIPELINE

4 Milestones

Placed → Processing → Shipped → Delivered

1. Executive Summary & Context

OVERVIEW

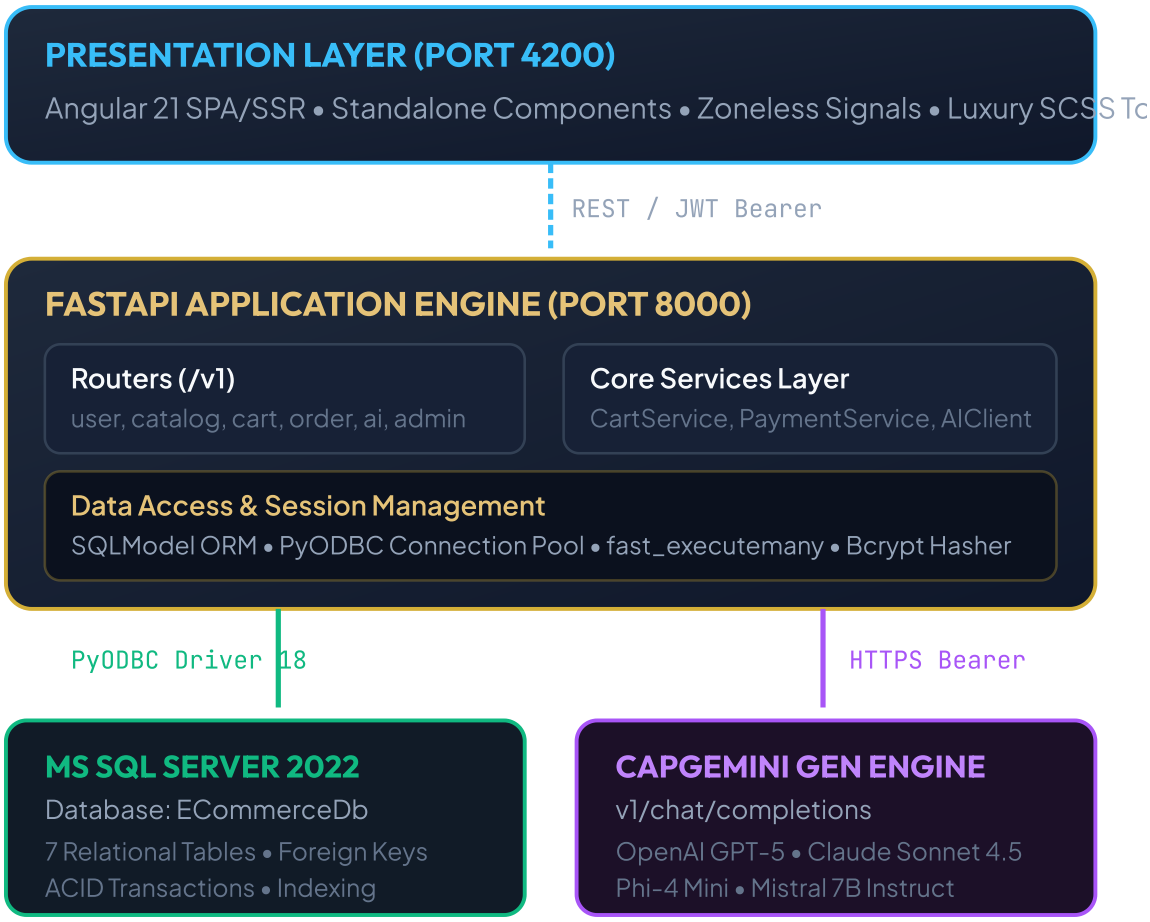

Modern high-end e-commerce requires bridging three traditionally disconnected paradigms: **rigid transactional integrity** (orders, stock, and payments), **frictionless interactive browsing** with micro-interactions, and **intelligent conversational assistance** that never hallucinates unstocked products or invalid pricing.

- **Stateless Micro-Services Gateway:** Built on Python 3.12 FastAPI with async I/O and Pydantic v2 validation contracts.
- **Signals-Driven Reactive Client:** Angular 21 with Standalone components, Zoneless signals, SSR hydration, and SCSS tokens.
- **High-Fidelity Enterprise Persistence:** Microsoft SQL Server 2022 backed by SQLAlchemy 2.0 and PyODBC with connection pooling.

2. System Architecture & Topology

TOPOLOGY

End-to-end multi-tier communication flow showing client orchestration, API gateway routing, business domains, database persistence, and external AI connectivity.

3. Enterprise Technology Matrix

TECH STACK

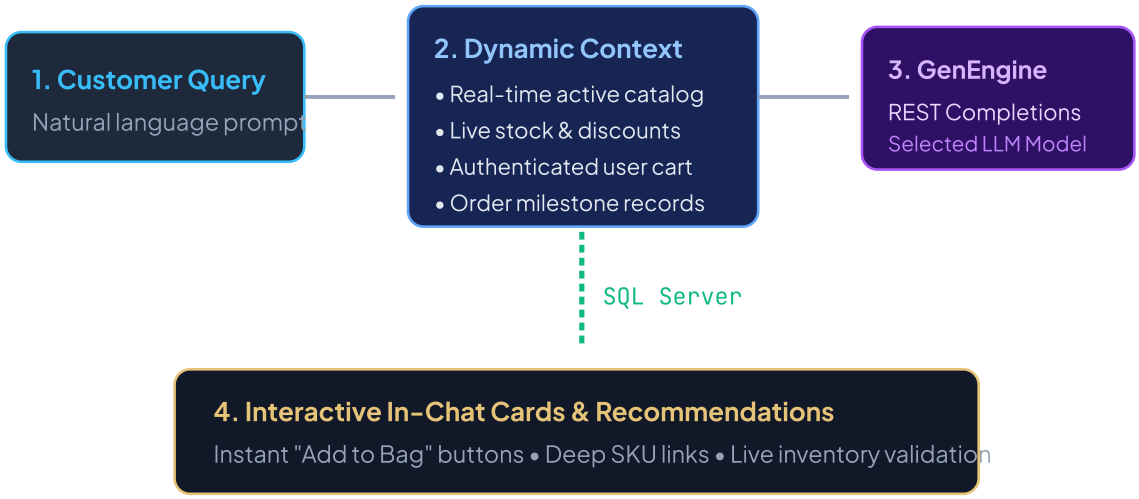

- **Angular 21**
  Signals, Standalone, SSR
- **FastAPI 0.115+**
  Async ASGI Gateway
- **MS SQL Server 2022**
  Enterprise Relational DB
- **Capgemini AI**
  Multi-LLM Generative Engine
- **PyJWT & Bcrypt**
  Cryptographic Security
- **Remixicon & Outfit**
  Luxury Typography & Icons

4. Grounded Conversational AI Concierge

AI PIPELINE

To eliminate the risk of generative hallucinations (such as inventing non-existent items, falsifying stock numbers, or promising unauthorized discounts), LuxeMart employs an **In-Context Live Relational Grounding Pipeline**.

openai.gpt-5 claude-sonnet-4.5 phi-4-mini mistral-7b

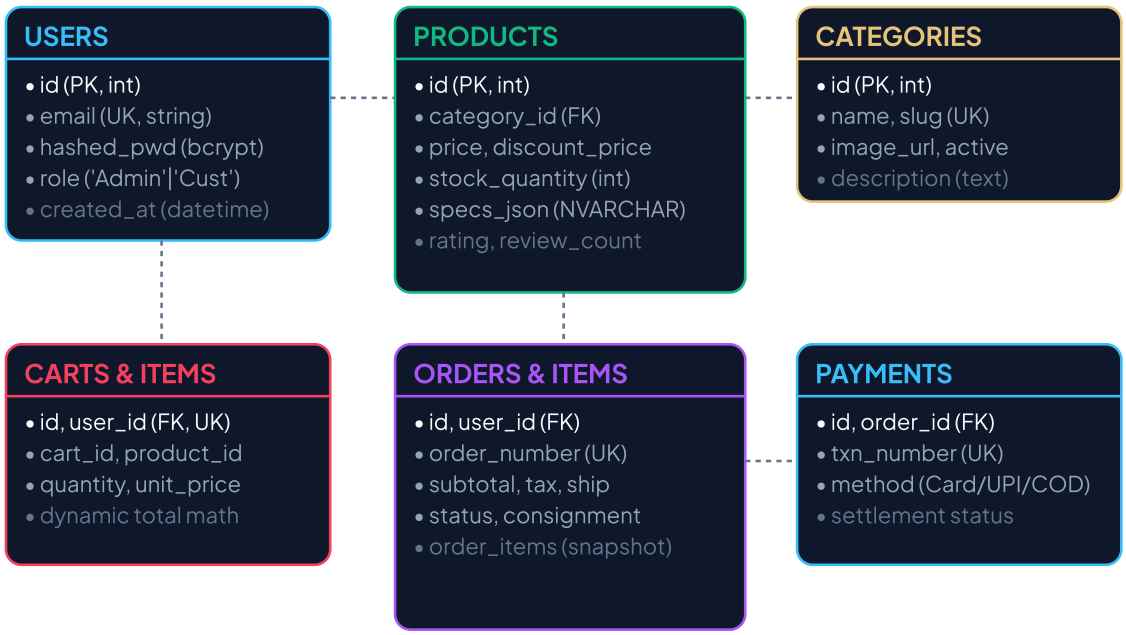

```
# Context Aggregation Engine (backend/app/ai/client.py)
def build_system_context(catalog, user_cart, recent_orders):
  return f"You are LuxeMart Concierge. Products in Stock: {catalog}. User Cart:
{user_cart}. Only recommend verified DB items."
```

5. Relational Data Architecture (ERD)

SCHEMA

Normalized 3NF relational schema implemented in **SQLModel / SQLAlchemy 2.0** with strict foreign key constraints, unique SKU indexes, and cascading relations.

6. Dual-Persona Experiences

UX FLOWS

C

Customer Discovery & Checkout

Faceted catalog filtering ($0–$3000 price slider, in-stock toggle, taxonomy pills), multi-angle image gallery, dynamic cart with $100 free shipping meter, and 4-gateway simulated payments.

A

Administrative Operations Console

Live KPI dashboard (Total Revenue $, Orders, Low Stock alerts < 10 units), complete Product CRUD modal, category analytics, and milestone order state transitions.

M

Milestone Stepper Timeline

Real-time visual progress tracker for customers: **Placed** → **Processing** → **Shipped** → **Delivered** with consignment tracking.

7. Security, RBAC & NFRs

COMPLIANCE

- **Cryptographic Passwords:** Irreversible Bcrypt salt hashing protects against rainbow table exploits.
- **Role-Based Access Control:** Dual-layer route guards in Angular (`adminGuard`) paired with FastAPI dependency injection (`get_current_admin`).
- **SQL Injection Immunity:** 100% parameterized queries generated by SQLModel; zero raw string concatenation.
- **P95 Response < 150ms:** PyODBC connection pool with `fast_executemany` enabled for rapid batch transactions.

8. Deployment Runbook & Accounts

OPERATIONS

Single-command setup with automatic database schema migration and rich catalog seeding on boot:

```
# 1. Start FastAPI Backend (Port 8000)
.\.venv\Scripts\uvicorn app.main:app --host 127.0.0.1 --port 8000 --reload

# 2. Start Angular 21 Frontend (Port 4200)
npm start -- --port 4200
```
